Yamen Najem

Backend Developer

Address: Artouz, Rif Dimashq, Syria | Phone: +963 932307869

Email: yamennajem709@gmail.com | GitHub: github.com/yamenya11

Professional Objective

Fifth-year Information Engineering student at Damascus University, specializing in web development with Laravel. Practical experience in building full-stack web applications applying Design Patterns, Clean Code, and SOLID principles. Seeking an internship or entry-level position in a dynamic development environment to expand my expertise and contribute to real-world .projects with a professional team

---

Education

Damascus University – Faculty of Information Engineering

Bachelor's Degree in Software Engineering (Expected 2026

2026 – 2021

Vocational Secondary School – Artouz

High School Diploma – Vocational Track

Professional Experience

Present – 2020

Backend Developer (Online Training) – Mad Solution Online

Present – 2024

- Developing web applications using Laravel PHP with MVC architecture.
- Building and optimizing Controllers, Routing, Middleware, and Data Validation.

- Utilizing Eloquent ORM for database interactions and query optimization.

Personal Projects (Self-Learning)

Presen – 2025

- Banking System (Laravel): Built a complete banking system applying Design Patterns (Factory, Observer, State, Repository, Strategy, Chain of Responsibility). Enhanced performance with Redis caching and pagination.

- Government Complaints System (Laravel): Developed a complaint management system following Clean Code, SOLID principles, advanced security (OTP, Auth), caching, eager loading, audit history, logging, and backup.

- Animal Association Management System (Laravel): Created a comprehensive platform for an animal shelter, managing adoptions, donations, departments, and user roles (Admin, Veterinarians, Volunteers).

- Crypto Puzzle (Java): Designed an interactive puzzle game using 2D arrays for matching numbers and generating random rewards.

- Secret Number Game (Java): Built a number guessing game with a special admin protection mode.

Technical Skills

- **Programming Languages** : PHP, Java, C# (Basics), JavaScript, HTML/CSS.

- **Frameworks** : Laravel, Vue.js

- **Databases** : MySQL, Oracle, SQL, Redis, Eloquent ORM

- **Tools & Environments** : Git, GitHub, Postman, VS.code Laragon.

- Software Engineering Concepts: OOP, SOLID Principles, Design Patterns (Factory, Observer, State, Repository, Strategy, Chain,composite,adapter,faced), Clean Code, MVC Architecture, RESTful APIs, Problem Solving.

- **Security & Performance**: Authentication/Authorization, Middleware, OTP, Caching (Redis), Eager Loading, Logging & Monitoring.

Key Projects

- Banking System (Laravel): Full-featured banking system with design patterns and performance optimizations (Redis, pagination).

- Government Complaints System (Laravel): Secure complaint management with audit trail and clean architecture.

- Animal Association (Laravel): Complete management platform for animal shelters (adoptions, donations, departments, roles.

- Crypto Puzzle (Java): 2D array-based puzzle game with random reward generation.

- Secret Number Game (Java):** Guessing game with admin protection mode.

Languages

- **Arabic:** Native

. **English:** Intermediate (B1) – good technical reading and comprehension

---

Strengths & Interests

Quick learner – adaptable to new technologies –

Passionate about "problem-solving" and application - performance optimization.

Active in developer communities, collaborating on - team projects

Continuously exploring modern web development practices
